

WHY TRUBLUE IS THE BEST

The TRUBLUE Auto Belay has quickly become the most trusted and most widely used auto belay in the world due to its high quality design, patented magnetic technology, and reliable performance. Here are some of the reasons the TRUBLUE is the best auto belay for your facility:

MAGNETIC BRAKING

The TRUBLUE is the only auto belay on the market to use magnetic braking technology. There are no contacting parts in the magnetic braking system, making this technology more reliable, low maintenance, and self-regulating.

SELF-REGULATING SYSTEM

The magnetic braking inside a TRUBLUE adjusts automatically and responds to the weight of the participant. This means children and adults will enjoy a similar experience and rate of descent.

LARGEST WEIGHT RANGE

The TRUBLUE accommodates the largest weight range of any auto belay, accommodating weights of 22 lbs (10kg) to 330 lbs (150 kg). This allows kids and adults alike to try climbing and get hooked on the sport.

LOW COST OF OWNERSHIP

The magnetic braking unique to TRUBLUE means there are no contacting parts in the braking system that could wear out or fail. This improves reliability while also reducing maintenance cost over time.

FIELD REPLACEABLE WEBBING

The webbing is a wear component that will eventually need replacing. Luckily, you can easily replace the TRUBLUE's webbing at your location. Our replacement webbings are also less expensive than the competition's, saving you significant costs over time.

STRICTEST SAFETY REQUIREMENTS

Our TRUBLUE auto belay meets the strictest safety standards of any auto belays on the market.

TALLEST MOUNTING HEIGHTS

Our TRUBLUE XL model has a maximum mounting height of 65 ft (19.8m), giving our devices the tallest range of all modular auto belay systems.

SIMPLE TO INSTALL OR RELOCATE

The compact, modular design makes the TRUBLUE easy to install and allows it to be relocated if desired.

DON'T LET GO (BUT IT'S OK IF YOU DO)

It's bound to happen; someone is going to accidentally let go of the webbing, and it will retract to the device. With a TRUBLUE, it is just a matter of pulling the webbing back down. With our competitor, this simple mistake will likely break the spring inside the device.

NO ASSIST UP THE WALL

Our retraction spring is strong enough to do its job but not strong enough to tug you up the wall. You'll feel secure pressure from the TRUBLUE but not enough to assist you in climbing. Sorry, we want to help you in many ways, but you're going to have to climb that wall yourself.
